

### **In The Claims**

This listing of claims will replace all prior listings of claims in the application:

1. (Previously Presented) A method for conducting electronic commerce transactions between a user and a plurality of vendors offering tangible goods, content, or services for rental or sale at a plurality of vendor web sites, the method comprising:

issuing a plurality of electronic tokens from a micropayment service provider server of a micropayment service provider to a user suitable for use in micropayment transactions;

providing a plurality of micropayment user accounts to the user, each micropayment user account in the plurality of micropayment accounts storing a subset of the electronic tokens purchased with a different currency;

providing a micropayment vendor account to each one of the plurality of vendors for settling payments for electronic tokens used by the user;

accepting, from a vendor, a request for a micropayment transaction between the user and the vendor for specific tangible goods, content, or services;

authorizing the micropayment transaction responsive to the request;

completing the purchase, responsive to the authorization, of the tangible goods, content, or services from one or more of the plurality of vendors; and

for each electronic transaction between the user and a vendor, recording a royalty transaction in a corresponding micropayment vendor account.

2. (Original) The method of claim 1, wherein a subset of the vendors offer content that is hosted at the vendor web sites, the method further comprising:

providing content to the user in exchange for electronic tokens; and

for each electronic transaction, recording a royalty transaction for the content in a corresponding micropayment vendor account.

9. (Original) The method of claim 8, wherein each micropayment user account in the plurality of micropayment user accounts stores a subset of the electronic tokens purchased with a different currency.

10. (Original) The method of claim 8, wherein the micropayment service provider provides a micropayment user interface to the user when the micropayment user account is opened by the user, the micropayment user interface allowing the user to check the status of the micropayment user account.

11. (Original) The method of claim 1, wherein the micropayment service provider provides a micropayment vendor application program interface to the plurality of vendors when the micropayment vendor accounts are opened by the plurality of vendors, the micropayment vendor application program interface allowing the plurality of vendors to offer electronic tokens as a payment method to the user.

12. (Original) The method of claim 1, further comprising rewarding one of the plurality of vendors for attracting a user to use electronic tokens for an electronic transaction.

13. (Original) The method of claim 1, wherein the micropayment service provider server facilitates user's purchase of content from the plurality of vendors without requiring multiple log-in and check-out procedures at each and every vendor web site.

14. (Original) The method of claim 1, wherein the micropayment service provider server enables a user to automatically dispute an unauthorized charge in the micropayment user account.

15. (Original) The method of claim 1, wherein the user may add funds to the micropayment user account prior to or after purchasing tangible goods, content, or services from the vendor.

16. (Original) The method of claim 1, wherein settling payments for electronic tokens comprises settling payments with the plurality of vendors according to a pre-determined amount threshold or time threshold.

17. (Currently Amended) A system for conducting electronic commerce transactions between a user and a plurality of vendors offering tangible goods, content, or services for rental or sale at a plurality of vendor web sites, without the user having to disclose personal information to one or more of the plurality of vendors, the system comprising:

- a micropayment service provider server, comprising:

- a routine for issuing a plurality of electronic tokens from the micropayment service provider server;

- a user database routine for updating records relating to the electronic tokens issued to the user;

- a vendor database routine for updating records relating to purchases made by the user using electronic tokens at the plurality of vendor web sites;

- a transaction routine for accepting a requests from a vendor for a transaction, the request identifying a specific user and specific tangible goods, content, or services,

- a verification routine for authorizing the transaction; and

- a transaction database routine for updating records of electronic transactions involving use of the electronic tokens at the plurality of vendor web site;\_

- a micropayment account user interface; and

- a micropayment vendor application program interface.

18. (Cancelled).

19. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine for recording a royalty transaction for each electronic transaction conducted at the plurality of vendor web sites using the electronic tokens.

20. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine to compute the royalty to compensate the author, publisher or other owner of intellectual property of each content sold through the electronic transaction.

21. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine allowing the user to purchase content at the plurality of vendor web sites without requiring multiple log-in and check-out procedures at each and every vendor web site.

22. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine allowing the user to instantly view a summary of the user's purchases at the plurality of vendor web sites.

23. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine allowing the user to set a threshold for purchasing tangible goods, content, or services, the threshold comprising either a total amount per electronic transaction or a total spending amount within a predetermined time period.

24. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine allowing the user to set a spending threshold at a plurality of vendor web sites.

25. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine to access content from a user's summary of purchased content without requiring a user to re-visit the content provider's web site.

26. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a security routine that sets a pre-determined time

period after the user logs in at the micropayment service provider server for allowing the user to purchase content at the plurality of vendor web sites.

27. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a security routine to prevent unauthorized downloading of content from the plurality of vendor web sites including encryption of a user login identification with a time variant encryption key.

28. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a security routine to prevent unauthorized downloading of content from the plurality of vendor web sites including validation of a plurality of URL addresses corresponding to the plurality of vendor web sites, transaction data and user login identification by the micropayment service provider server.

29. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine providing security means to prevent unauthorized change of transaction data by creating a transaction ID for the transaction data and limiting transmission of the transaction data between the micropayment service provider server and the plurality of vendor web servers.

30. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine for settlement of account with the plurality of vendors, according to pre-determined amount thresholds or pre-determined time periods.

31. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine for transferring tokens from one user's account to another user's account.

32. (Previously Presented) The system of claim 17, wherein the electronic tokens are issued directly to the user by the micropayment service provider or through the plurality of vendor web sites.

33. (Previously Presented) The system of claim 17, wherein the micropayment service provider server further comprises a routine for establishing multiple users within one user account, each of the multiple users having the same account privileges.

34. (Original) The system of claim 17, wherein the micropayment account user interface comprises routines for allowing the user to check the status of a plurality of micropayment user accounts opened with the micropayment service provider.

35. (Original) The system of claim 17, wherein the micropayment account user interface comprises one or more of: a web interface hosted at the micropayment service provider server; a client interface downloaded by the user from the micropayment service provider server; an interactive voice response system; and an offline interface with a customer service representative of the micropayment service provider.

36. (Original) The system of claim 35, wherein the web interface and the client interface comprise screens for:

- adding funds to the plurality of micropayment user accounts to pay for electronic tokens using multiple currencies;

- selecting a plurality of payment methods to add funds to the plurality of micropayment user accounts;

- selecting spending limits for the plurality of micropayment user accounts;

- viewing a history of transactions recorded on the plurality of micropayment user accounts;

- disputing transactions recorded on the plurality of micropayment user accounts; and

- accessing the plurality of vendor web sites.

37. (Original) The system of claim 36, wherein the plurality of payment methods comprise a plurality of online payment methods and a plurality of offline payment methods.

38. (Original) The system of claim 37, wherein the plurality of online payment methods comprise one or more of: credit card payment; electronic check payment; electronic currency payment; and automatic debit on a plurality of bank accounts maintained by the user.

39. (Original) The system of claim 37, wherein the plurality of offline payment methods comprise one or more of: check payment; money order payment; purchase order payment; payment by phone; payment through an Internet service provider providing Internet services to the user; payment through a utility company providing utility services to the user; and payment through bills mailed to the user by the micropayment service provider.

40. (Original) The system of claim 17, wherein the micropayment account user interface further comprises an interface for allowing the plurality of vendors to manage a plurality of micropayment vendor accounts opened with the micropayment service provider.

41. (Original) The system of claim 17, wherein the micropayment vendor application program interface comprises routines for the plurality of vendors to offer electronic tokens as a payment method to the user without having to install client software provided by the micropayment service provider.

42. (Original) The system of claim 41, further comprising a routine for transmitting information from the plurality of vendor web servers to the micropayment service provider server when the user is purchasing a tangible good, content, or service at the plurality of vendor web sites, the information comprising information about each and every vendor from which the user is purchasing the tangible good, content, or service and information about the tangible good, content, or service.

43. (Original) The system of claim 42, wherein the information about each and every vendor comprises one or more of: vendor login information; web form post parameter; response from the micropayment service provider server authorizing the purchase of the user; and other optional information for internal tracking purposes.

44. (Original) The system of claim 42, wherein the information about the content comprises one or more of: title of the content; price of the content; short description of the content; content URL address; number of times to view the content; number of hours to view the content; number of days to view the content; expiration time of the content; and incentive IDs associated with the content.
